

Silent Install command:

```
"C:/TESCO/TescoDeviceManager" --accept-licenses --accept-messages --auto-answer  
OverwriteTargetDirectory=Yes --confirm-command install
```

“C:/TESCO/TescoDeviceManager” can be replaced with the target directory/path where TDM would be installed.

Silent Uninstall command:

```
C:\TESCO\TescoDeviceManager\maintenancetool.exe purge --confirm-command
```

“C:\TESCO\TescoDeviceManager” can be replaced with the directory/path where TDM was installed.

Here’s an example of a bat script to uninstall previous version of TDM and install a new version (bat script is ran while current directory on the terminal has the installer for TDM):

```
@echo off
```

```
IF NOT EXIST "C:\TESCO\TescoDeviceManager\maintenancetool.exe" GOTO waitlopend  
C:\TESCO\TescoDeviceManager\maintenancetool.exe purge --confirm-command
```

```
:waitloop
```

```
IF NOT EXIST "C:\TESCO\TescoDeviceManager\maintenancetool.exe" GOTO waitlopend  
timeout /t 1  
goto waitloop
```

```
:waitlopend
```

```
TescoDeviceManager_Setup.exe --root "C:/TESCO/TescoDeviceManager" --accept-licenses --  
accept-messages --auto-answer OverwriteTargetDirectory=Yes --confirm-command install
```
