MitM Cables

Man-in-the-Middle Cables for the T4000 and T4350

The Man-in-the-Middle Cable features a DC charging cable. The MitM is used for charging electric vehicles (EV) with direct current (DC). In the EVSE charger field, rapidly evolving technology and current legislation outpaces product development and cost prohibitive potential products. The MitM is a cost-effective option, as it can be used with other testing.

As the cars and EVSE evolve, the MitM, the T4000 and the T4350 will evolve to handle them in concert, rather than purchasing even larger and more expensive new mass load boxes to meet the customer's needs.

MitM Models:

- 350 Amp CCSI
- 350 Amp TESLA/NACS
- More models coming soon

Features:

- Charging connector holder
- Digital temperature sensors
